Overview of Mergerstat Control Premium Study 2022

The Mergerstat Control Premium Study 2022 compiles and analyzes control premiums paid in acquisition transactions involving publicly traded companies. Control premiums refer to the additional value buyers are willing to pay to acquire a controlling interest in a company, reflecting benefits such as strategic decision-making power and synergies. This study offers a detailed statistical examination of premiums over the past year, segmented by various factors including industry sectors, transaction sizes, and deal characteristics. The 2022 edition continues Mergerstat's tradition of providing a trusted benchmark for evaluating control premiums in merger and acquisition activity, serving as a critical tool for valuation professionals.

Purpose and Importance

The primary purpose of the mergerstat control premium study 2022 pdf is to assist valuation experts, investment bankers, and corporate executives in understanding market trends related to control premiums. By aggregating and standardizing control premium data, the study facilitates accurate valuation judgments and supports strategic decision-making in M&A transactions. Its importance lies in the fact that control premiums directly impact deal pricing, negotiation strategies, and fairness opinions.

Scope of the Study

The study covers a wide range of transactions involving publicly listed companies in the United States, including full and partial acquisitions. It excludes private company transactions unless integrated from other Mergerstat databases. The analysis spans various industries, enabling sector-specific insights, and categorizes premiums based on deal sizes to reflect market dynamics at different transaction scales.

Methodology and Data Sources

The mergerstat control premium study 2022 pdf relies on a rigorous methodology to ensure the reliability and relevance of its findings. The data collection process involves compiling completed deals with publicly available pricing information, followed by calculation of control premiums based on pre-transaction market prices and final acquisition prices.

Data Collection Process

Transaction data is gathered from SEC filings, press releases, and Mergerstat's proprietary databases. Each transaction is vetted to confirm its status as an acquisition involving a controlling interest. The study focuses on deals where premium calculations are feasible, meaning sufficient market price data exists before the announcement and closing dates.

Calculation of Control Premiums

Control premiums are calculated as the percentage difference between the acquisition price per share and the market price per share prior to the transaction announcement or closing. The study employs a standardized approach to select the market price reference point, typically using the target company's stock price 30 days before announcement to avoid market manipulation or speculation effects.

Segmentation and Analysis

The data is segmented by key parameters such as industry classification, deal size, and transaction type (e.g., mergers, tender offers). Statistical techniques are applied to present averages, medians, and ranges of control premiums, offering a granular view of market

behavior across sectors and deal characteristics.

Key Findings and Industry Insights

The mergerstat control premium study 2022 pdf reveals significant trends in control premiums paid across industries and deal sizes, reflecting shifting market conditions and strategic priorities in M&A activity.

Average Control Premiums by Industry

Industries such as technology and healthcare tend to exhibit higher average control premiums, often exceeding 30%, due to high growth potential and competitive bidding environments. Conversely, sectors like utilities and basic materials generally show lower premiums, reflecting more stable or regulated markets.

Effect of Deal Size on Premiums

Smaller deals frequently display higher control premiums as buyers seek to gain control in niche or rapidly growing companies. Larger deals often have lower premiums on average, influenced by negotiation leverage and regulatory scrutiny.

Trends in 2022

The 2022 data indicates a moderate increase in overall control premiums compared to previous years, attributed to heightened competition for quality assets and favorable financing conditions. The study also notes an uptick in cross-border transactions, which tend to command higher premiums due to integration risks and strategic value.

Applications of the Control Premium Study

The mergerstat control premium study 2022 pdf serves multiple practical purposes in corporate finance, valuation, and legal contexts.

Valuation and Fairness Opinions

Valuation professionals utilize the study to benchmark control premiums when developing valuations for buyouts, fairness opinions, or financial reporting. It provides empirical data supporting premium assumptions in discounted cash flow or market-based approaches.

Negotiation and Deal Structuring

M&A advisors and corporate strategists leverage the study's insights to inform negotiation strategies and deal structuring by understanding prevailing premium levels within industries and deal types.

Litigation and Regulatory Review

The documented control premium data is frequently referenced in shareholder litigation and regulatory reviews to evaluate the reasonableness of acquisition prices and fairness to minority shareholders.

Comparison with Previous Years

The mergerstat control premium study 2022 pdf builds upon historical data compiled in earlier editions, allowing for year-over-year comparison and trend analysis in control premiums.

Historical Premium Trends

Over the last decade, control premiums have fluctuated in response to economic cycles, regulatory changes, and market sentiment. The 2022 study highlights a rebound in premiums following the pandemic-related downturn in 2020, aligning with increased M&A activity and investor confidence.

Changes in Industry Dynamics

Compared to previous years, the 2022 edition shows a notable rise in premiums within technology and healthcare sectors, reflecting their growing prominence in acquisition strategies. Conversely, traditional industries have seen more stable or slightly declining premiums.

Accessing and Using the Mergerstat Control Premium Study 2022 PDF

Obtaining the mergerstat control premium study 2022 pdf typically involves purchasing or licensing the report from Mergerstat or authorized distributors. The PDF format allows for easy dissemination and reference within professional environments.

Report Contents

The PDF version includes detailed statistical tables, graphical analyses, and industry

summaries. It also contains methodological notes and definitions critical for accurate interpretation of the data.

Best Practices for Utilization

To maximize the value of the control premium study, users should:

- Integrate the data with other valuation tools and market research
- Consider industry-specific nuances and deal context
- Use the study as a benchmark rather than a definitive predictor
- Keep abreast of updates and complementary studies for comprehensive analysis
