

TESTOSTERONE REPLACEMENT THERAPY AND AFIB

TESTOSTERONE REPLACEMENT THERAPY AND AFIB REPRESENT A COMPLEX INTERSECTION OF CARDIOVASCULAR AND HORMONAL HEALTH CONCERNS THAT HAVE GARNERED INCREASING ATTENTION IN RECENT MEDICAL RESEARCH. TESTOSTERONE REPLACEMENT THERAPY (TRT) IS COMMONLY PRESCRIBED TO TREAT MALE HYPOGONADISM AND AGE-RELATED TESTOSTERONE DECLINE, AIMING TO RESTORE HORMONE LEVELS AND IMPROVE QUALITY OF LIFE. HOWEVER, ATRIAL FIBRILLATION (AFIB), THE MOST COMMON SUSTAINED CARDIAC ARRHYTHMIA, PRESENTS POTENTIAL RISKS THAT MAY BE INFLUENCED BY HORMONAL TREATMENTS. UNDERSTANDING THE RELATIONSHIP BETWEEN TESTOSTERONE REPLACEMENT THERAPY AND AFIB IS ESSENTIAL FOR CLINICIANS AND PATIENTS ALIKE, AS IT INVOLVES EVALUATING BENEFITS, RISKS, AND UNDERLYING MECHANISMS. THIS ARTICLE EXPLORES THE EFFECTS OF TRT ON CARDIAC RHYTHM, POTENTIAL PROARRHYTHMIC OR PROTECTIVE INFLUENCES, CLINICAL EVIDENCE, AND GUIDELINES FOR MANAGING PATIENTS WITH OR AT RISK FOR AFIB. THE DISCUSSION ALSO COVERS THE PATHOPHYSIOLOGY OF AFIB, TESTOSTERONE'S CARDIOVASCULAR IMPACT, AND RECOMMENDATIONS FOR SAFE TRT ADMINISTRATION IN SUSCEPTIBLE POPULATIONS.

- CLINICAL EVIDENCE AND RESEARCH FINDINGS
- MECHANISMS LINKING TESTOSTERONE AND CARDIAC ARRHYTHMIAS
- RISK FACTORS AND PATIENT CONSIDERATIONS
- MANAGEMENT STRATEGIES FOR PATIENTS ON TRT WITH AFIB

UNDERSTANDING TESTOSTERONE REPLACEMENT THERAPY

TESTOSTERONE REPLACEMENT THERAPY IS A MEDICAL TREATMENT DESIGNED TO SUPPLEMENT LOW TESTOSTERONE LEVELS IN MEN EXPERIENCING HYPOGONADISM OR AGE-RELATED HORMONAL DECLINE. TRT CAN BE ADMINISTERED VIA VARIOUS FORMS INCLUDING INJECTIONS, PATCHES, GELS, OR PELLETS. THE PRIMARY GOAL IS TO RESTORE SERUM TESTOSTERONE TO PHYSIOLOGICAL LEVELS, THEREBY ALLEVIATING SYMPTOMS SUCH AS FATIGUE, DECREASED LIBIDO, MUSCLE LOSS, AND MOOD DISTURBANCES.

TESTOSTERONE PLAYS A CRUCIAL ROLE IN MALE HEALTH BEYOND REPRODUCTIVE FUNCTIONS, INFLUENCING BONE DENSITY, MUSCLE MASS, ERYTHROPOIESIS, AND CARDIOVASCULAR FUNCTION. TRT HAS BEEN SHOWN TO IMPROVE QUALITY OF LIFE AND PHYSICAL PERFORMANCE WHEN APPROPRIATELY INDICATED AND MONITORED. HOWEVER, CONCERNS REGARDING CARDIOVASCULAR SAFETY, INCLUDING THE POTENTIAL IMPACT ON ARRHYTHMIAS LIKE ATRIAL FIBRILLATION, NECESSITATE CAREFUL PATIENT EVALUATION.

INDICATIONS AND METHODS OF ADMINISTRATION

TRT IS TYPICALLY INDICATED FOR MEN WITH CONFIRMED LOW TESTOSTERONE LEVELS AND CLINICAL SYMPTOMS. THE COMMON MODES OF ADMINISTRATION INCLUDE:

- INTRAMUSCULAR INJECTIONS (E.G., TESTOSTERONE ENANTHATE OR CYPIONATE)
- TRANSDERMAL PATCHES AND GELS APPLIED DAILY
- SUBCUTANEOUS PELLETS IMPLANTED FOR LONG-TERM RELEASE

- ORAL FORMULATIONS, THOUGH LESS COMMON DUE TO VARIABLE ABSORPTION

EACH METHOD HAS DISTINCT PHARMACOKINETICS AND RISK PROFILES, INFLUENCING PATIENT ADHERENCE AND OUTCOMES.

OVERVIEW OF ATRIAL FIBRILLATION (AFib)

ATRIAL FIBRILLATION IS CHARACTERIZED BY AN IRREGULAR AND OFTEN RAPID HEART RHYTHM ORIGINATING FROM DISORGANIZED ELECTRICAL SIGNALS IN THE ATRIA. AFib INCREASES THE RISK OF STROKE, HEART FAILURE, AND OVERALL CARDIOVASCULAR MORBIDITY AND MORTALITY. IT IS HIGHLY PREVALENT IN OLDER ADULTS AND THOSE WITH UNDERLYING CARDIOVASCULAR DISEASE.

AFib SYMPTOMS RANGE FROM ASYMPTOMATIC TO PALPITATIONS, DIZZINESS, FATIGUE, AND SHORTNESS OF BREATH. DIAGNOSIS IS PRIMARILY MADE VIA ELECTROCARDIOGRAPHY. MANAGEMENT FOCUSES ON RATE OR RHYTHM CONTROL AND STROKE PREVENTION THROUGH ANTICOAGULATION.

RISK FACTORS AND EPIDEMIOLOGY

KEY RISK FACTORS FOR AFib INCLUDE:

- AGE (INCIDENCE INCREASES WITH ADVANCING AGE)
- HYPERTENSION
- CORONARY ARTERY DISEASE
- HEART FAILURE AND VALVULAR HEART DISEASE
- OBESITY AND METABOLIC SYNDROME
- EXCESSIVE ALCOHOL USE
- THYROID DYSFUNCTION

UNDERSTANDING THESE FACTORS AIDS IN ASSESSING PATIENT VULNERABILITY WHEN CONSIDERING HORMONE THERAPIES SUCH AS TRT.

THE RELATIONSHIP BETWEEN TESTOSTERONE REPLACEMENT THERAPY AND AFib

THE INTERPLAY BETWEEN TESTOSTERONE REPLACEMENT THERAPY AND ATRIAL FIBRILLATION REMAINS AN AREA OF ONGOING INVESTIGATION. WHILE TESTOSTERONE INFLUENCES CARDIOVASCULAR PHYSIOLOGY, ITS ROLE IN THE DEVELOPMENT OR MITIGATION OF AFib IS NOT FULLY ESTABLISHED. SOME STUDIES SUGGEST THAT LOW ENDOGENOUS TESTOSTERONE LEVELS MAY BE ASSOCIATED WITH HIGHER CARDIOVASCULAR RISK, INCLUDING ARRHYTHMIAS, WHEREAS OTHERS RAISE CONCERNS ABOUT EXOGENOUS TESTOSTERONE POTENTIALLY EXACERBATING ARRHYTHMIC SUSCEPTIBILITY.

CLINICIANS MUST WEIGH THE CARDIOVASCULAR BENEFITS OF NORMALIZING TESTOSTERONE AGAINST POTENTIAL PROARRHYTHMIC RISKS, PARTICULARLY IN PATIENTS WITH PREEXISTING HEART DISEASE OR THOSE AT HIGH RISK FOR AFib.

POTENTIAL EFFECTS OF TRT ON CARDIAC RHYTHM

TESTOSTERONE MAY IMPACT CARDIAC ELECTROPHYSIOLOGY THROUGH SEVERAL PATHWAYS:

- MODULATION OF ION CHANNEL EXPRESSION AND FUNCTION
- INFLUENCE ON AUTONOMIC NERVOUS SYSTEM BALANCE
- EFFECTS ON MYOCARDIAL REMODELING AND FIBROSIS
- ALTERATIONS IN SYSTEMIC INFLAMMATION AND OXIDATIVE STRESS

THESE MECHANISMS CAN THEORETICALLY EITHER PROMOTE OR PROTECT AGAINST ATRIAL ARRHYTHMOGENESIS, DEPENDING ON INDIVIDUAL PATIENT FACTORS AND TRT DOSING.

CLINICAL EVIDENCE AND RESEARCH FINDINGS

CLINICAL STUDIES INVESTIGATING THE ASSOCIATION BETWEEN TESTOSTERONE REPLACEMENT THERAPY AND ATRIAL FIBRILLATION HAVE PRODUCED MIXED RESULTS. SOME OBSERVATIONAL DATA INDICATE THAT TRT DOES NOT SIGNIFICANTLY INCREASE AFIB INCIDENCE, WHILE OTHERS REPORT A MODEST INCREASE IN ARRHYTHMIA RISK, ESPECIALLY WITH SUPRAPHYSIOLOGICAL DOSING.

RANDOMIZED CONTROLLED TRIALS ASSESSING CARDIOVASCULAR OUTCOMES WITH TRT OFTEN EXCLUDE PATIENTS WITH KNOWN ARRHYTHMIAS, LIMITING DIRECT EVIDENCE. META-ANALYSES HIGHLIGHT THE NEED FOR FURTHER LARGE-SCALE, LONG-TERM STUDIES TO CLARIFY TRT'S SAFETY PROFILE IN RELATION TO AFIB.

SUMMARY OF KEY STUDIES

- A POPULATION-BASED COHORT STUDY IDENTIFIED NO SIGNIFICANT ASSOCIATION BETWEEN TRT AND INCREASED AFIB RISK IN HYPOGONADAL MEN.
- SOME CASE SERIES REPORT NEW-ONSET AFIB FOLLOWING HIGH-DOSE TESTOSTERONE SUPPLEMENTATION.
- RESEARCH SUGGESTS NORMALIZATION OF TESTOSTERONE LEVELS MAY REDUCE SYSTEMIC INFLAMMATION, POTENTIALLY LOWERING ARRHYTHMIC TRIGGERS.
- ANIMAL MODELS SHOW MIXED ELECTROPHYSIOLOGICAL RESPONSES TO TESTOSTERONE, EMPHASIZING THE COMPLEXITY OF HORMONAL EFFECTS ON THE HEART.

MECHANISMS LINKING TESTOSTERONE AND CARDIAC ARRHYTHMIAS

THE BIOLOGICAL MECHANISMS CONNECTING TESTOSTERONE REPLACEMENT THERAPY AND ATRIAL FIBRILLATION INVOLVE MULTIPLE PHYSIOLOGICAL SYSTEMS. TESTOSTERONE INFLUENCES CARDIAC ION CHANNELS, AUTONOMIC TONE, MYOCARDIAL STRUCTURE, AND SYSTEMIC FACTORS THAT CONTRIBUTE TO ARRHYTHMOGENESIS.

ION CHANNEL MODULATION

TESTOSTERONE CAN ALTER THE EXPRESSION AND FUNCTION OF SODIUM, POTASSIUM, AND CALCIUM CHANNELS IN CARDIOMYOCYTES. THESE CHANGES AFFECT ACTION POTENTIAL DURATION AND REFRACTORY PERIODS, WHICH ARE CRITICAL IN THE INITIATION AND MAINTENANCE OF AFIB.

AUTONOMIC NERVOUS SYSTEM EFFECTS

TESTOSTERONE IMPACTS SYMPATHETIC AND PARASYMPATHETIC BALANCE, POTENTIALLY MODIFYING HEART RATE VARIABILITY AND ARRHYTHMIA SUSCEPTIBILITY. ENHANCED SYMPATHETIC ACTIVITY MAY PREDISPOSE TO AFIB, WHILE PARASYMPATHETIC DOMINANCE HAS COMPLEX EFFECTS ON ATRIAL ELECTROPHYSIOLOGY.

MYOCARDIAL REMODELING AND FIBROSIS

CHRONIC TESTOSTERONE DEFICIENCY IS ASSOCIATED WITH ADVERSE CARDIAC REMODELING, WHICH CAN CONTRIBUTE TO AFIB SUBSTRATE FORMATION. CONVERSELY, TRT MAY EITHER AMELIORATE OR EXACERBATE FIBROSIS DEPENDING ON DOSING AND INDIVIDUAL RESPONSE, INFLUENCING ATRIAL STRUCTURAL INTEGRITY.

RISK FACTORS AND PATIENT CONSIDERATIONS

WHEN CONSIDERING TESTOSTERONE REPLACEMENT THERAPY IN PATIENTS AT RISK FOR ATRIAL FIBRILLATION, COMPREHENSIVE EVALUATION OF INDIVIDUAL RISK FACTORS IS ESSENTIAL. PATIENT HISTORY, CARDIOVASCULAR STATUS, AND BASELINE ARRHYTHMIA RISK SHOULD GUIDE THERAPY DECISIONS.

ASSESSMENT PRIOR TO TRT INITIATION

1. DETAILED CARDIOVASCULAR RISK ASSESSMENT INCLUDING HISTORY OF ARRHYTHMIAS
2. BASELINE ELECTROCARDIOGRAM AND, IF INDICATED, AMBULATORY CARDIAC MONITORING
3. EVALUATION OF COMORBID CONDITIONS SUCH AS HYPERTENSION, SLEEP APNEA, AND OBESITY
4. DISCUSSION OF POTENTIAL BENEFITS AND RISKS WITH THE PATIENT

MONITORING DURING THERAPY

REGULAR FOLLOW-UP IS CRITICAL TO DETECT EARLY SIGNS OF ARRHYTHMIA DEVELOPMENT OR OTHER CARDIOVASCULAR ADVERSE EFFECTS. MONITORING STRATEGIES INCLUDE PERIODIC ECGs, SYMPTOM ASSESSMENT, AND ADJUSTMENT OF TRT DOSING AS NEEDED.

MANAGEMENT STRATEGIES FOR PATIENTS ON TRT WITH AFIB

FOR PATIENTS RECEIVING TESTOSTERONE REPLACEMENT THERAPY WHO DEVELOP ATRIAL FIBRILLATION OR HAVE ESTABLISHED AFIB, MANAGEMENT REQUIRES A MULTIDISCIPLINARY APPROACH. COORDINATION BETWEEN ENDOCRINOLOGY AND CARDIOLOGY SPECIALISTS ENSURES OPTIMIZED OUTCOMES.

THERAPEUTIC CONSIDERATIONS

- REASSESSING THE NECESSITY AND DOSE OF TRT BASED ON CARDIAC STATUS
- IMPLEMENTING STANDARD AFIB THERAPIES SUCH AS RATE CONTROL, RHYTHM CONTROL, AND ANTICOAGULATION

- ADDRESSING MODIFIABLE RISK FACTORS INCLUDING WEIGHT MANAGEMENT, BLOOD PRESSURE CONTROL, AND TREATMENT OF SLEEP APNEA
- CLOSE MONITORING FOR TRT-RELATED SIDE EFFECTS IMPACTING CARDIAC RHYTHM

IN SOME CASES, DISCONTINUATION OR MODIFICATION OF TESTOSTERONE THERAPY MAY BE WARRANTED TO MINIMIZE ARRHYTHMIA RISK.

FREQUENTLY ASKED QUESTIONS

CAN TESTOSTERONE REPLACEMENT THERAPY (TRT) INCREASE THE RISK OF ATRIAL FIBRILLATION (AFib)?

CURRENT RESEARCH SUGGESTS THAT TESTOSTERONE REPLACEMENT THERAPY MAY HAVE COMPLEX EFFECTS ON CARDIOVASCULAR HEALTH, BUT THERE IS LIMITED AND INCONCLUSIVE EVIDENCE DIRECTLY LINKING TRT TO AN INCREASED RISK OF ATRIAL FIBRILLATION. PATIENTS SHOULD CONSULT THEIR HEALTHCARE PROVIDER TO EVALUATE INDIVIDUAL RISKS.

IS IT SAFE FOR PATIENTS WITH ATRIAL FIBRILLATION TO UNDERGO TESTOSTERONE REPLACEMENT THERAPY?

TESTOSTERONE REPLACEMENT THERAPY IN PATIENTS WITH ATRIAL FIBRILLATION SHOULD BE APPROACHED CAUTIOUSLY. IT IS ESSENTIAL FOR PATIENTS TO DISCUSS POTENTIAL BENEFITS AND RISKS WITH THEIR CARDIOLOGIST AND ENDOCRINOLOGIST, AS TRT MIGHT INFLUENCE HEART RHYTHM AND OTHER CARDIOVASCULAR PARAMETERS.

HOW DOES TESTOSTERONE REPLACEMENT THERAPY AFFECT HEART RHYTHM AND THE DEVELOPMENT OF AFib?

TESTOSTERONE CAN INFLUENCE CARDIOVASCULAR FUNCTION THROUGH EFFECTS ON BLOOD PRESSURE, LIPID PROFILES, AND INFLAMMATION. WHILE SOME STUDIES INDICATE TESTOSTERONE MIGHT IMPROVE CERTAIN HEART CONDITIONS, ITS IMPACT ON HEART RHYTHM AND ATRIAL FIBRILLATION DEVELOPMENT REMAINS UNCLEAR AND REQUIRES FURTHER INVESTIGATION.

ARE THERE ANY MONITORING RECOMMENDATIONS FOR PATIENTS WITH AFib RECEIVING TESTOSTERONE REPLACEMENT THERAPY?

PATIENTS WITH ATRIAL FIBRILLATION UNDERGOING TESTOSTERONE REPLACEMENT THERAPY SHOULD HAVE REGULAR CARDIOVASCULAR MONITORING, INCLUDING ECGs AND ASSESSMENT OF HEART RHYTHM, TO DETECT ANY POTENTIAL EXACERBATION OF ARRHYTHMIAS OR NEW ONSET OF AFib.

WHAT ALTERNATIVES EXIST FOR MANAGING LOW TESTOSTERONE IN PATIENTS WITH A HISTORY OF ATRIAL FIBRILLATION?

FOR PATIENTS WITH A HISTORY OF ATRIAL FIBRILLATION, ALTERNATIVES TO TESTOSTERONE REPLACEMENT THERAPY MAY INCLUDE LIFESTYLE MODIFICATIONS, ADDRESSING UNDERLYING CAUSES OF LOW TESTOSTERONE, AND CONSIDERING NON-HORMONAL TREATMENTS. DECISIONS SHOULD BE PERSONALIZED AND MADE IN CONSULTATION WITH HEALTHCARE PROVIDERS.

ADDITIONAL RESOURCES

1. *TESTOSTERONE REPLACEMENT THERAPY: BENEFITS AND RISKS FOR CARDIOVASCULAR HEALTH*
THIS BOOK EXPLORES THE COMPLEX RELATIONSHIP BETWEEN TESTOSTERONE REPLACEMENT THERAPY (TRT) AND

CARDIOVASCULAR HEALTH, WITH A FOCUS ON ATRIAL FIBRILLATION (AFIB). IT PROVIDES AN EVIDENCE-BASED ANALYSIS OF HOW TRT CAN IMPACT HEART RHYTHM AND OVERALL CARDIOVASCULAR FUNCTION. READERS WILL GAIN INSIGHTS INTO MANAGING TRT IN PATIENTS WITH PRE-EXISTING HEART CONDITIONS.

2. ATRIAL FIBRILLATION AND HORMONAL INFLUENCES: UNDERSTANDING TRT EFFECTS

DELVING INTO THE HORMONAL ASPECTS OF HEART RHYTHM DISORDERS, THIS BOOK EXAMINES HOW TESTOSTERONE LEVELS AFFECT ATRIAL FIBRILLATION. IT DISCUSSES THE PHYSIOLOGICAL MECHANISMS BEHIND HORMONE-DRIVEN CARDIAC CHANGES AND EVALUATES THERAPEUTIC APPROACHES. THE TEXT IS IDEAL FOR ENDOCRINOLOGISTS AND CARDIOLOGISTS INTERESTED IN INTEGRATED CARE.

3. MANAGING ATRIAL FIBRILLATION IN MEN UNDERGOING TESTOSTERONE THERAPY

THIS PRACTICAL GUIDE OFFERS STRATEGIES FOR CLINICIANS MANAGING PATIENTS WHO RECEIVE TESTOSTERONE REPLACEMENT THERAPY AND HAVE ATRIAL FIBRILLATION. IT COVERS DIAGNOSTIC CHALLENGES, TREATMENT OPTIONS, AND MONITORING PROTOCOLS TO OPTIMIZE PATIENT OUTCOMES. CASE STUDIES ILLUSTRATE REAL-WORLD APPLICATIONS AND DECISION-MAKING PROCESSES.

4. TESTOSTERONE, HEART RHYTHM, AND AGING: A CLINICAL PERSPECTIVE

FOCUSING ON OLDER MEN, THIS BOOK REVIEWS THE INTERPLAY BETWEEN DECLINING TESTOSTERONE LEVELS, TRT, AND THE RISK OF DEVELOPING ATRIAL FIBRILLATION. IT DISCUSSES AGE-RELATED CARDIOVASCULAR CHANGES AND PROVIDES RECOMMENDATIONS FOR SAFE HORMONE THERAPY. THE BOOK IS A VALUABLE RESOURCE FOR GERIATRIC MEDICINE SPECIALISTS.

5. CARDIAC ARRHYTHMIAS AND HORMONE THERAPY: WHAT CLINICIANS NEED TO KNOW

THIS COMPREHENSIVE VOLUME ADDRESSES VARIOUS CARDIAC ARRHYTHMIAS, INCLUDING AFIB, IN THE CONTEXT OF HORMONE THERAPIES SUCH AS TESTOSTERONE REPLACEMENT. IT HIGHLIGHTS POTENTIAL RISKS, MONITORING STRATEGIES, AND THERAPEUTIC ADJUSTMENTS TO MINIMIZE ADVERSE EFFECTS. THE BOOK SERVES AS A REFERENCE FOR CARDIOLOGISTS AND ENDOCRINOLOGISTS ALIKE.

6. THE ROLE OF TESTOSTERONE IN ATRIAL FIBRILLATION: PATHOPHYSIOLOGY AND TREATMENT

EXPLORING THE SCIENTIFIC BASIS OF TESTOSTERONE'S INFLUENCE ON ATRIAL FIBRILLATION, THIS BOOK SYNTHESIZES CURRENT RESEARCH FINDINGS. IT EXPLAINS MOLECULAR AND CELLULAR MECHANISMS AND DISCUSSES HOW TRT MIGHT MODIFY THE COURSE OF AFIB. CLINICIANS AND RESEARCHERS WILL FIND THIS TEXT VALUABLE FOR UNDERSTANDING HORMONE-DRIVEN CARDIAC PATHOLOGY.

7. HORMONE REPLACEMENT THERAPY AND CARDIAC ARRHYTHMIAS: A PATIENT-CENTERED APPROACH

THIS PATIENT-FOCUSED GUIDE OFFERS CLEAR EXPLANATIONS OF HOW TESTOSTERONE REPLACEMENT THERAPY MAY AFFECT HEART RHYTHM, PARTICULARLY ATRIAL FIBRILLATION. IT EMPOWERS PATIENTS WITH KNOWLEDGE ABOUT SYMPTOMS, RISKS, AND LIFESTYLE MODIFICATIONS. HEALTHCARE PROVIDERS CAN USE THIS RESOURCE TO FACILITATE INFORMED DISCUSSIONS WITH PATIENTS.

8. TESTOSTERONE THERAPY IN CARDIOVASCULAR DISEASE: BALANCING BENEFITS AND RISKS

ANALYZING THE DUAL NATURE OF TESTOSTERONE THERAPY, THIS BOOK WEIGHS ITS POTENTIAL CARDIOVASCULAR BENEFITS AGAINST THE RISKS OF ARRHYTHMIAS LIKE AFIB. IT PRESENTS CLINICAL TRIAL DATA, EXPERT OPINIONS, AND GUIDELINES TO ASSIST IN THERAPEUTIC DECISION-MAKING. THE BOOK IS ESSENTIAL FOR ANYONE INVOLVED IN MANAGING HORMONE THERAPY PATIENTS.

9. ATRIAL FIBRILLATION: EMERGING PERSPECTIVES ON ENDOCRINE INFLUENCES AND TREATMENT

THIS VOLUME HIGHLIGHTS EMERGING RESEARCH ON THE ENDOCRINE SYSTEM'S ROLE IN ATRIAL FIBRILLATION, WITH A PARTICULAR EMPHASIS ON TESTOSTERONE REPLACEMENT THERAPY. IT INTEGRATES CARDIOLOGY AND ENDOCRINOLOGY VIEWPOINTS TO OFFER INNOVATIVE TREATMENT PARADIGMS. READERS WILL APPRECIATE THE FORWARD-THINKING APPROACH TO COMPLEX PATIENT CARE.
