Each guess must be a valid five-letter word, and the game provides feedback in the form of colored tiles indicating letter accuracy. This simple yet engaging mechanic has contributed to Wordle's rapid rise in popularity, as it combines vocabulary skills with deductive reasoning.

Gameplay Mechanics

The game starts with an empty grid representing the six attempts and five letter slots per attempt. Players enter their guesses, and after each submission, the game visually updates to reflect the accuracy of each letter. This iterative process helps players narrow down possible word options. The challenge lies in balancing risk and information gathering, as each guess provides critical data to zero in on the correct answer.
